

15.482 Healthcare Finance

Spring 2017

Andrew W. Lo, MIT

Unit 9, Part 2: Clinical Trial Success Rates

Unit Outline

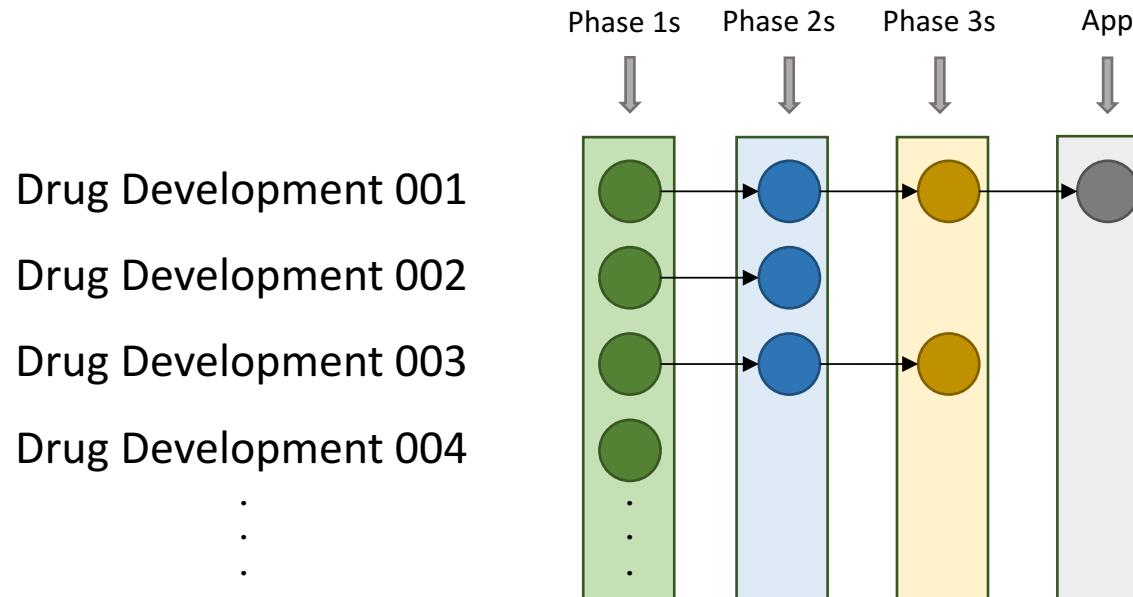

- Risk and Return in the Biopharma Industries, 1930-2015
- Estimating Clinical Success Rates
- Predicting Phase Transitions and Approvals
- Patient-Centered Clinical Trials

Estimation of Clinical Trial Success Rates and Related Parameters

Chi Heem Wong, Kien Wei Siah, Andrew W. Lo (2017)

Clinical Trials Success Rates

- Given trial data, we compute the probability of a drug development making it from Phase i to Phase j

Clinical Trials Success Rates

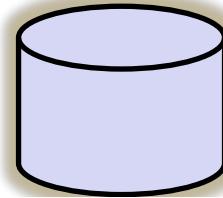

Data Sample

TrialID	Therapeutic Area	Drug Name	Phase	Disease Type	Start Date	End Date	Sponsor	Drug Development ID	Move on to the next phase?
48391	Autoimmune/ Inflammation	Loratadine	1/2	Allergic Rhinitis	NULL	2003-06-07	(Other Hospital/ Academic/ Medical Center)	?	?
70538	Autoimmune/ Inflammation	Loratadine	3	Allergic Rhinitis	NULL	2007-09-18	(Other Hospital/ Academic/ Medical Center)	?	?
100378	Autoimmune/ Inflammation	Loratadine	3	Asthma	NULL	2008-10-29	Merck & Co.	?	?
122164	Autoimmune/ Inflammation	Loratadine	4	Allergic Rhinitis	2010-01-01	2012-03-01	(Other Hospital/ Academic/ Medical Center)	?	?
151465	CNS	Loratadine	3	Pain (nociceptive)	2011-05-01	2014-05-14	Cancer and Leukemia Group B (CALGB)	?	?
153368	Autoimmune/ Inflammation	Loratadine	1	Asthma	NULL	2006-07-01	(Other Hospital/ Academic/ Medical Center)	?	?

- Trivial task if we could know whether a phase i trials for a drug development led to trial(s) in phase $i+1$

Clinical Trials Success Rates

More information in trial level data

Our study

Thomas et. al (2016)

Hay et. al (2016)

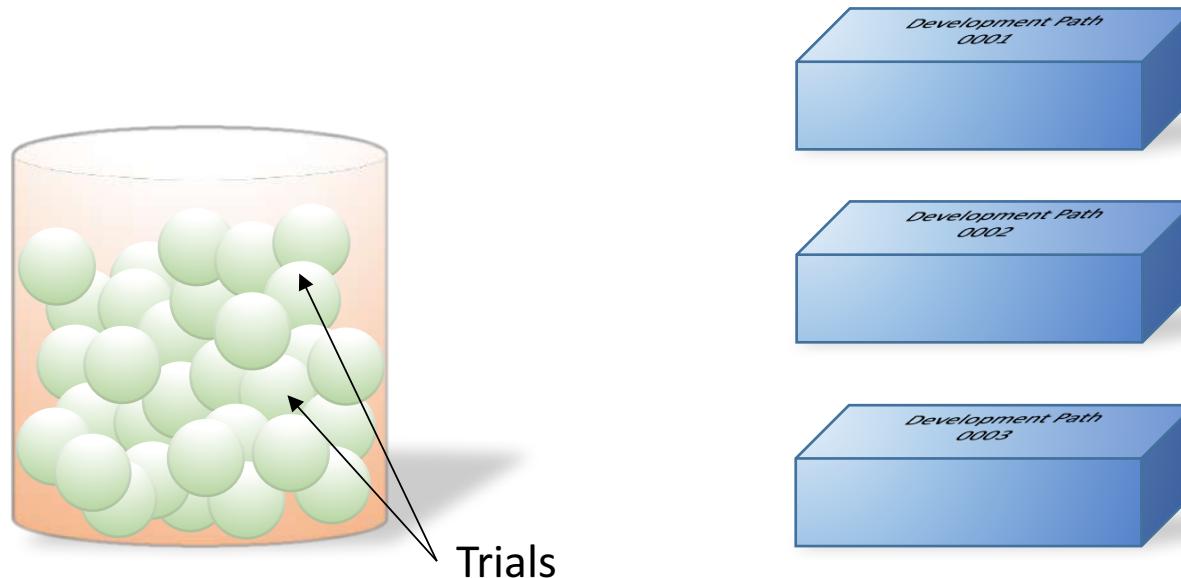

Dimasi et. al (2010)

Number of Drugs	15,102	?	5,820	1,316
Years of source data (time-span)	2000- 2015 (15 years)	2006-2015 (9 years)	2003-2011 (9 years)	1993-2009 (17 years)
Number of Companies	5,764	1,103	835	50
Phase Transitions	175,535	9,985	7,372	?
Analysis	Lead / All	Lead / All	Lead / All	Lead only
Methodology	“Path-by-path”	“Phase-by-phase”	“Phase-by-phase”	“Phase-by-phase”

Clinical Trials Success Rates

- Step 1: Identification of drug development paths

Clinical Trials Success Rates

- Step 1: Identification of drug development paths
 - We filtering by company, drug and indication to isolate trials that belong to the same drug development.
 - But, there is noise in the data. Consider the fictitious example:

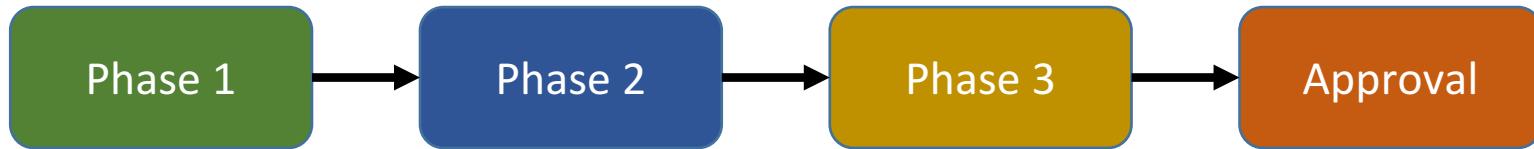

Drug Development #0001	
Id = 000234	Phase 1
Id = 029847	Phase 1
Id = 038562	Phase 3

- No phase 2! Did this development do so well in Phase 1 that it skipped Phase 2? Does it matter?

Clinical Trials Success Rates

- Step 1: Identification of drug development paths

Idealized drug development path: Every drug development MUST have gone through the lower stages to reach the higher stages.

Examples:

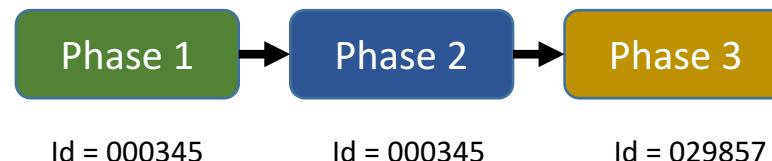

- To reach approval, the development must have gone through Phase 1, 2, 3.
- To reach phase 3, the development must have had a Phase 2 (or equivalent)

Clinical Trials Success Rates

- Step 1: Identification of drug development paths

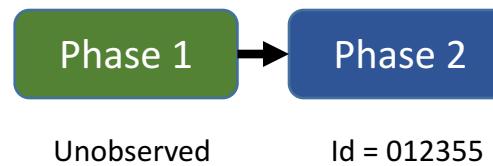

Drug Development #0002	
Id = 000345	Phase 1/2
Id = 029857	Phase 3

Drug development implied by model:

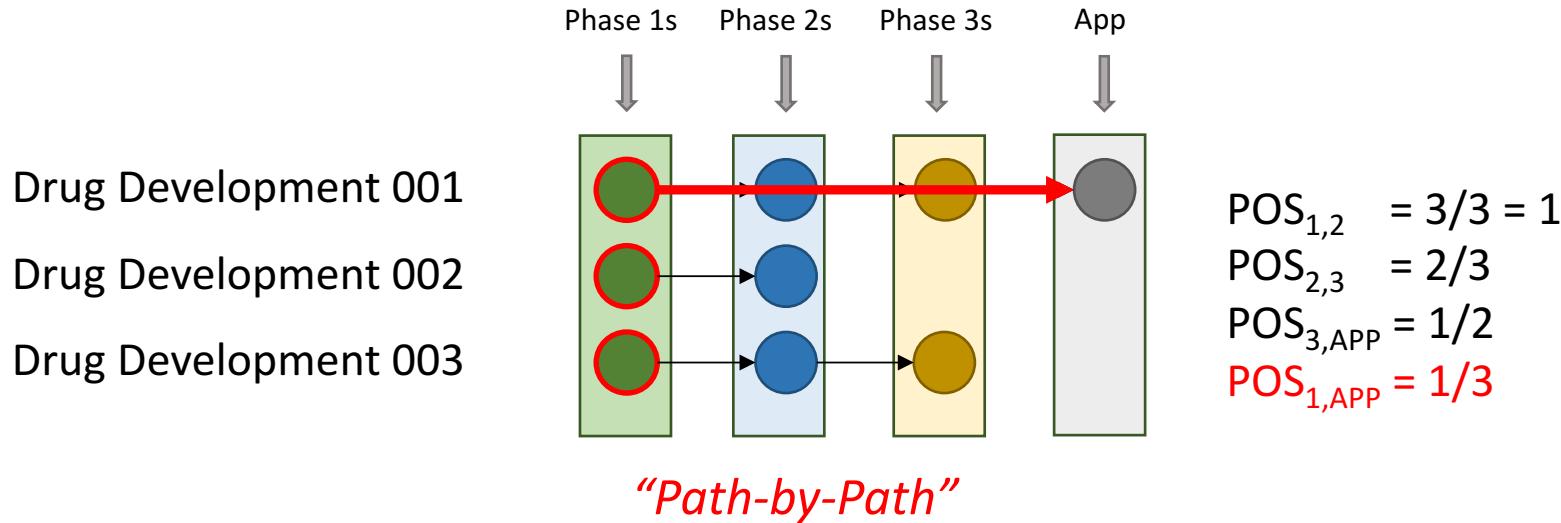

Drug Development #0003	
Id = 012355	Phase 2

Drug development implied by model:

Clinical Trials Success Rates

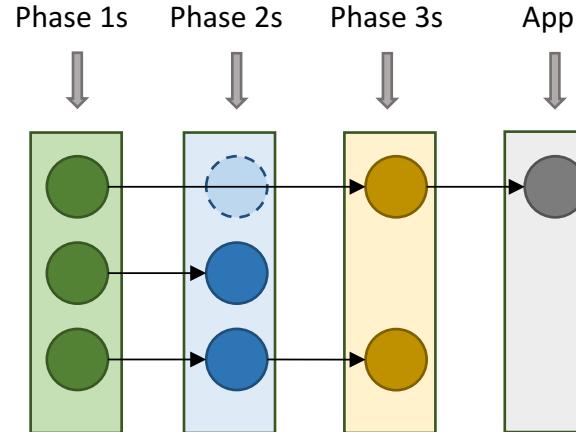

- Step 2: Count proportion of development paths that make it to a phase

Clinical Trials Success Rates

- Missing data imputation

Drug Development 001
 Drug Development 002
 Drug Development 003

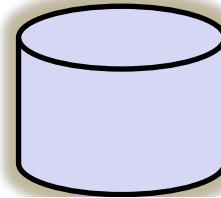

If we don't impute missing phase transitions AND we use "phase-by-phase":

$$\begin{aligned} \text{POS}_{1,2} &= 3/3 = 1 \\ \text{POS}_{2,3} &= 2/3 \\ \text{POS}_{3,\text{APP}} &= 1/2 \\ \text{POS}_{1,\text{APP}} &= 1/3 \end{aligned}$$

$$\begin{aligned} \text{POS}_{1,2} &= 3/3 = 1 \\ \text{POS}_{2,3} &= 1/2 \\ \text{POS}_{3,\text{APP}} &= 1/2 \\ \text{POS}_{1,\text{APP}} &= 1/2 * 1/2 = 1/4 \end{aligned}$$

Clinical Trials Success Rates
